REMARKS1. Amendments to the Claims

Applicants have amended the claims to more clearly define the invention. Specifically, claims 13, 28, 31, and 255 have been amended to more clearly stated that the at least one actuator is configured to adjust the spacing the template and the substrate. Also, claim 18 has been amended to properly recite monitoring light. None of the amendments to the claims were necessitated to overcome any prior art and no new matter has been introduced by these amendments.

Applicants respectfully request that the present amendment be entered and the application proceeds to issuance in due course incorporating the present amendment.
